

React Master Notes - From Basics to Advanced

Phase 1: Setup & Fundamentals

Explanation: React is a JavaScript library for building user interfaces. It uses a component-based architecture. How It Works: React uses a Virtual DOM to efficiently update the UI. Example: `function App() { return Hello World; }` Best Practices: Use functional components and hooks. Pitfalls: Avoid direct DOM manipulation. Mini Project: Create a simple greeting app. Advanced Insight: React 18 introduces concurrent rendering.
